

Datos básicos de la asignatura

Titulación:	Grado en Ingeniería Informática-Ingeniería del Software
Año plan de estudio:	2010
Curso implantación:	2010-11
Centro responsable:	E.T.S. Ingeniería Informática
Nombre asignatura:	Proceso Software y Gestión I
Código asignatura:	2050050
Tipología:	OBLIGATORIA
Curso:	3
Periodo impartición:	Primer cuatrimestre
Créditos ECTS:	6
Horas totales:	150
Área/s:	Lenguajes y Sistema Informáticos
Departamento/s:	Lenguajes y Sistemas Informáticos

Coordinador de la asignatura

MEJIAS RISOTO, MANUEL

Profesorado (puede sufrir modificaciones a lo largo del curso por necesidades organizativas del Departamento)

Profesorado del grupo de actividad principal

GUTIERREZ RODRIGUEZ, JAVIER JESUS

Profesorado del grupo de actividad principal

OLIVERO GONZALEZ, MIGUEL ANGEL

Objetivos y resultados del aprendizaje

Conocer los aspectos básicos relacionados con el proceso software.

Conocer diferentes modelos de referencia relacionados con el proceso software.

Conocer aspectos relacionados con la calidad en el ámbito del proceso software.

Conocer aspectos relacionados con la contratación en el ámbito del proceso software.

Conocer aspectos relacionados con la adquisición en el ámbito del proceso software.

Desarrollar actividades de trabajo en equipo.

Desarrollar la capacidad de elaboración de documentación según lo considerado en el ámbito de la ingeniería del software.

Conocer aspectos básicos relacionados con la realización de proyectos en el ámbito del proceso software.

Conocimientos o contenidos: C04, C05 Y C09

Competencias: COM01, COM09 Y COM10

Habilidades o destrezas: HD01, HD02, HD05, HD07, HD08 Y HD10

Contenidos o bloques temáticos

-- Introducción al proceso software.

-- Modelos de proceso.

-- Gestión de adquisiciones.

-- Gestión de la calidad.

Relación detallada y ordenación temporal de los contenidos

1. The software process: introduction, information gathering techniques, process-modelling technique.

2. MÉTRICA V3: Structure, goals, processes and roles.

3. Capability Maturity Model Integration: introduction, structure, views, capability levels and maturity levels.

4. Assurance and management of software quality: introduction, quality theories, quality models, quality assurance, quality management in a quality technical office, regulatory framework.

5. Frameworks of reference: introduction and basic concepts, ITIL, DevOps, LEAN, Agile

(Scrum).

6. Procurement Management: introduction, procurement planning, requisition management, supplier selection, contracting, standards.

Actividades formativas y horas lectivas

Actividad	Horas
A Clases Teóricas	36
E Prácticas de Laboratorio	24

Idioma de impartición del grupo

INGLÉS

Sistemas y criterios de evaluación y calificación

Tal y como establece el artículo 6 de la normativa de la Universidad de Sevilla que regula la evaluación y calificación de las asignaturas, la evaluación de las competencias, conocimientos y capacidades adquiridas por los estudiantes podrán basarse en actividades de evaluación continua, exámenes parciales y/o exámenes finales. La asistencia a clases teóricas podrá puntuar de manera positiva en la calificación final. Además se podrán contemplar requisitos específicos, que deberán ser definidos en los proyectos docentes anuales, en relación a la realización de exámenes, a la realización de cualquier otro tipo de pruebas, a la obligatoriedad en la realización de trabajos, a la obligatoriedad a la asistencia a clases prácticas, a proyectos y a clases prácticas de laboratorio, así como a la participación en seminarios.

Metodología de enseñanza-aprendizaje

Clases teóricas: explicación por el profesor, con la interacción del alumno, del contenido teórico práctico de la asignatura.

Prácticas informáticas: desarrollo en grupo, con la supervisión del profesor, de ejercicios de aplicación de los conocimientos estudiados en las clases teóricas.

Ejercicios de evaluación.

Horarios del grupo del proyecto docente

Calendario de exámenes

<https://www.informatica.us.es/index.php/calendario-de-examenes>

Tribunales específicos de evaluación y apelación

Presidente: RAFAEL CORCHUELO GIL

Vocal: ANTONIA MARIA REINA QUINTERO

Secretario: DAVID FELIPE BENAVIDES CUEVAS

Suplente 1: IRENE BARBA RODRIGUEZ

Suplente 2: JOSE CRISTOBAL RIQUELME SANTOS

Suplente 3: VICTOR JESUS DIAZ MADRIGAL

Sistemas y criterios de evaluación y calificación del grupo

Criterio de calificación

The subject consists of two parts:

Part A: Theoretical-practical fundamentals.

This section presents the thematic content of the course in lectures, where the theoretical foundations are presented together with practical exercises.

Part B: Application exercises.

In accordance with the approach of the subject, in this section students will carry out, in groups, application exercises, hereinafter referred to as practical exercises. These practical exercises will be explained, supervised and worked on in the classes set aside for this purpose, without prejudice to the fact that, where appropriate, they may have to be completed by the students outside class hours. The results and the documentation produced by the students must be handed in on the dates indicated in the development of the course.

Assessment activities

- The assessment of Part A will be carried out by means of a final exam. This exam, which will cover the entire content of the subject, will be held on the corresponding dates and dates as

established by the competent bodies of the Centre.

- For the course evaluation of part A, prior to the final exam in the first sitting, two evaluation exercises will be held, each of which will account for fifty percent of the grade corresponding to this part A. The dates of each exercise, as well as the content to be assessed in each of them, will be communicated to the students beforehand.
- Depending on the approach of the subject, the grade for Part B will usually correspond to the evaluation of the documentation submitted by the students on each of the practical exercises, or, exceptionally, to the grade of the practical exam.
- The evaluation of the documentation of the practical exercises corresponding to Part B of the subject will be carried out for the evaluation of the first call.
- Exceptionally, for the assessment of the practical exercises in the official examinations of the subject, students who have not taken the practical exercises during the course have the option of taking an exam on these practical exercises, hereinafter referred to as the "practical exam". This practical exam will be held at the same time as the final exams of the respective official examinations and will assess the student's complete knowledge and mastery of the material and documentation related to the respective practical exercises carried out during the course, as well as the content and development of the same.

Class attendance

- The individual attendance of the students to the practical classes will be taken into account for the individual qualification of each of the practical exercises.

Qualification criteria

- Three practical exercises are foreseen. The final grade for part B on the basis of the qualifications for each of the practical exercises will be obtained as follows:

Grade for part B = $0.3 \times \text{Practical 1 grade} + 0.3 \times \text{Practical 2 grade} + 0.4 \times \text{Practical 3 grade}$.

If during the development of the course the previous forecast should be modified, the previous formula will be adapted to the new circumstances.

II) The final grade of the subject for the course pass, prior to the final exam in the first sitting, will be obtained as indicated below:

In this case the grade for part B will be the grade obtained on the basis of the grades for each of the practical exercises.

a) If the grade for Part A is greater than or equal to 4:

Final grade = Part A mark x 0.70 + Part B mark x 0.30.

b) If the grade for Part A is less than 4:

Final grade = min (3,9; Grade Part A x 0,70 + Grade Part B x 0,30)

According to the above expression, when the grade for Part A is lower than 4, the final grade will have as a corresponding value the lower value resulting from the comparison between 3.9 and the result of evaluating the expression Grade Part A x 0.70 + Grade Part B x 0.30.

III) The final grade of the course in the first, second and third convocation will be obtained in the following way:

1. If the student has taken the practical exercises and has not sat the practical exam:

In this case, the grade for part B will be the grade obtained on the basis of the grades for each of the practical exercises.

a) If the grade for Part A is greater than or equal to 4:

Final grade = Part A grade x 0.70 + Part B grade x 0.30.

b) If the grade for Part A is less than 4:

Final grade = $\min(4.5; \text{Part A grade} \times 0.70 + \text{Part B grade} \times 0.30)$.

According to the above expression, when the grade for Part A is lower than 4, the final grade will have as the corresponding value the lower value resulting from the comparison between 4.5 and the result of evaluating the expression $\text{Grade Part A} \times 0.70 + \text{Grade Part B} \times 0.30$.

2. If the student has taken the practical exam:

In this case, the grade for Part B will be the grade obtained in the practical examination.

a) If the grade for Part A is greater than or equal to 5:

Final Grade = $\text{Grade Part A} \times 0.70 + \text{Grade Part B} \times 0.30$.

b) If the grade for Part A is less than 5:

Final Grade = $\min(4.5; \text{Grade Part A} \times 0.70 + \text{Grade Part B} \times 0.30)$

According to the previous expression, when the Part A grade is less than 5, the final grade will have as a corresponding value the lower value resulting from the comparison between 4.5 and the result of evaluating the expression $\text{Part A grade} \times 0.70 + \text{Part B grade} \times 0.30$.

IV) Other considerations:

a) In the exams and evaluation exercises of part A, whether they are course evaluation exercises or final exams, in which the theoretical-practical content of the subject is evaluated,

some questions or exercises related to the practices of the subject carried out during the academic year 2024/2025 may be included, on an ad hoc basis.

- b) Final grade must be equal to or higher than five in order to pass the course.
- c) In order to pass the course, the grade for part A will be that obtained through the evaluation exercises that will be carried out during the course and prior to the final exam in the first sitting.
- d) For the first, second and third sittings, the grade for Part A will correspond to the grade obtained in the corresponding exam of the subject.
- e) Those students who do not achieve a pass mark for the course must sit the final exam of the subject.
- f) Students who sit the internship exam in any of the exam sessions will be considered to have waived the internship grade obtained by doing the internship during the course. The grade for part B of the course will be the grade obtained in the corresponding practical exam.
- g) Students who do not achieve a pass mark in the subject will maintain the grade for part A during the exam sessions corresponding to this Teaching Project of the subject, as long as this grade is equal to or higher than five.
- h) Students who do not achieve a pass in the subject and who have completed the practical exercises of the subject, the grade for part B will be maintained during the exam sessions corresponding to this Teaching Project of the subject, as long as the student has not taken a practical exam.
- i) The grade obtained in an internship exam will be maintained during the exam sessions corresponding to this Teaching Project of the subject, provided that this grade is equal to or higher than five and the student has not subsequently sat a new internship exam.
